

# # Fish Ledger App: Complete Development Roadmap

## ## Executive Summary

**\*\*Project Goal\*\***: Create a voice-activated digital ledger for fish sellers in Ghana that automatically records sales through natural conversation monitoring.

**\*\*Timeline\*\***: 12 months from research to public launch

**\*\*Target Users\*\***: Tabletop fish sellers in Ghana markets

**\*\*Success Metric\*\***: 100+ active daily users with 70%+ transaction accuracy by Month 12

---

## ## PHASE 0: Pre-Development Foundation (Weeks 1-4)

### ### **\*\*Week 1-2: Market Research & Validation\*\***

#### #### **\*\*Objectives\*\***

- Validate the problem and solution with real sellers
- Understand daily seller workflows and pain points
- Identify partnership opportunities

#### #### **\*\*Activities\*\***

- [ ] Visit 5 different fish markets in Ghana (Accra, Kumasi, Tema)
- [ ] Conduct 30+ seller interviews (15-20 minutes each)
- [ ] Shadow 5 sellers for full market days
- [ ] Document typical daily transaction volumes
- [ ] Identify technology access (smartphone ownership, data plans)

#### #### **\*\*Key Questions to Answer\*\***

- How many sales do sellers make per day?
- How do they currently track (if at all)?
- What's their biggest business challenge?
- Would they pay for this solution? How much?
- What languages do they primarily use?

#### #### **\*\*Deliverables\*\***

- Market research report with key findings
- User persona profiles (3-5 typical seller types)
- Problem validation document
- Competitive analysis (existing solutions)

**\*\*Budget\*\***: \$500-1000 (travel, small compensation for interviews)

#### ### **\*\*Week 3-4: Audio Data Collection\*\***

##### #### **\*\*Objectives\*\***

- Collect authentic fish market transaction recordings
- Build initial training dataset for AI models
- Understand acoustic environment challenges

##### #### **\*\*Activities\*\***

- [ ] Obtain permission from 10 sellers to record transactions
- [ ] Set up recording equipment (smartphones with external mics)
- [ ] Record 200+ complete transactions across different:
  - Times of day (morning rush, midday, evening)
  - Weather conditions (affecting background noise)
  - Market locations (indoor, outdoor, busy, quiet)
- [ ] Manually annotate 100 transactions with:
  - Speaker labels (seller/customer)
  - Transaction phases
  - Fish types mentioned
  - Prices stated
  - Languages used

##### #### **\*\*Recording Protocol\*\***

...

For each transaction record:

- Audio file (WAV format, 16kHz)
- Metadata (time, location, market conditions)
- Manual transcript

- Fish type and price (ground truth)
- Audio quality rating (1-5)
- Background noise level (low/medium/high)
- ...

#### **\*\*Deliverables\*\***

- 200+ annotated transaction recordings
- Audio quality analysis report
- Common phrase catalog (English + Twi)
- Noise profile analysis

**\*\*Budget\*\***: \$300-500 (recording equipment, seller compensation)

---

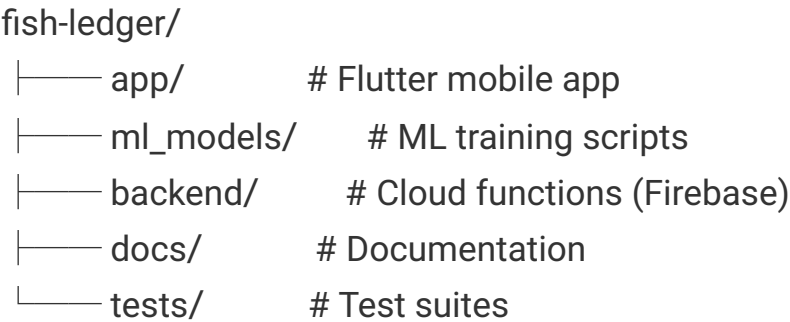

## PHASE 1: MVP Development (Months 2-4)

### **\*\*Month 2: Core Audio Processing\*\***

#### **\*\*Week 1-2: Development Environment Setup\*\***

**\*\*Activities\*\***

- [ ] Set up development environment
  - Install Android Studio / Flutter SDK
  - Set up version control (GitHub/GitLab)
  - Configure CI/CD pipeline
  - Set up testing devices (2-3 Android phones)
- [ ] Create project architecture
- ...

...

- [ ] Set up development team roles (if applicable)
- Lead developer (you)
- ML engineer (you or partner)
- UI/UX designer (freelance or partner)

### **\*\*Deliverables\*\***

- Working development environment
- Project repository with initial structure
- Team collaboration tools set up

---

### **#### \*\*Week 3-4: Basic Audio Capture\*\***

#### **\*\*Technical Implementation\*\***

```
```kotlin
```

```
// Core audio capture functionality
```

```
class AudioCaptureEngine {
```

- Continuous audio recording (16kHz, mono)
- Circular buffer (30 seconds)
- Voice Activity Detection (VAD)
- Basic noise filtering
- Audio file management

```
}
```

```
```
```

#### **\*\*Activities\*\***

- [ ] Implement continuous audio recording service
- [ ] Add Voice Activity Detection (using WebRTC VAD)
- [ ] Create circular buffer for audio storage
- [ ] Implement basic noise gate
- [ ] Test battery consumption (target: <10% per hour)
- [ ] Test audio quality in various conditions

#### **\*\*Testing Criteria\*\***

- Successfully records clear audio in quiet environment

- VAD correctly identifies speech vs silence (>90% accuracy)
- Battery usage acceptable for all-day operation
- Audio files properly managed (no storage overflow)

## **\*\*Deliverables\*\***

- Working audio capture module
- Battery consumption report
- Audio quality test results

---

## **### \*\*Month 3: Speech Recognition & Pattern Matching\*\***

### **#### \*\*Week 1-2: Speech-to-Text Integration\*\***

#### **\*\*Technical Implementation\*\***

```
```python
```

```
class SpeechRecognitionEngine {  
    - Google Speech-to-Text API integration  
    - Offline fallback (basic model)  
    - Text preprocessing and cleaning  
    - Language detection (English/Twi)  
}  
...
```

#### **\*\*Activities\*\***

- [ ] Integrate Google Cloud Speech-to-Text API
- [ ] Implement offline speech recognition (Vosk/Whisper Lite)
- [ ] Create hybrid online/offline strategy
- [ ] Test recognition accuracy with collected audio samples
- [ ] Optimize for Ghanaian English and Pidgin

#### **\*\*Testing Criteria\*\***

- >80% word accuracy on clear fish market audio
- <3 second latency for transcription
- Graceful offline mode degradation
- Proper handling of code-switching

## **\*\*Deliverables\*\***

- Working speech-to-text module
- Accuracy benchmark report
- Cost analysis for API usage

---

## **#### \*\*Week 3-4: Transaction Pattern Detection\*\***

### **\*\*Technical Implementation\*\***

```
```python
```

```
class TransactionDetector {  
    - Keyword pattern matching  
    - Price extraction (numbers + currency)  
    - Fish type identification  
    - Transaction state machine  
    - Confidence scoring  
}  
...
```

### **\*\*Activities\*\***

- [ ] Build pattern matching engine for:
  - Price inquiries ("How much", "Σεν na εφε")
  - Price responses (number + "cedis")
  - Fish names (tilapia, tuna, mackerel, etc.)
  - Payment confirmations
- [ ] Implement simple state machine
- [ ] Create confidence scoring algorithm
- [ ] Test with annotated transaction samples

### **\*\*Testing Criteria\*\***

- Correctly identifies price mentions (>85% accuracy)
- Recognizes top 5 fish types (>80% accuracy)
- Detects complete transactions (>70% accuracy)
- Minimal false positives (<10%)

## **\*\*Deliverables\*\***

- Transaction detection module
- Pattern matching test results
- False positive/negative analysis

---

## **### \*\*Month 4: Database & Basic UI\*\***

### **#### \*\*Week 1-2: Local Database Implementation\*\***

#### **\*\*Technical Implementation\*\***

```sql

- Core database schema
- Transactions table
- Daily summaries table
- Audio logs table
- User settings table

```

#### **\*\*Activities\*\***

- [ ] Set up SQLite database
- [ ] Create database models and DAOs
- [ ] Implement CRUD operations
- [ ] Add data validation
- [ ] Create backup/restore functionality
- [ ] Test data integrity and performance

#### **\*\*Deliverables\*\***

- Working local database
- Data model documentation
- Database performance benchmarks

---

### **#### \*\*Week 3-4: Minimum Viable UI\*\***

## **\*\*UI Components\*\***

---

### Screens:

1. Home/Dashboard (today's sales summary)
2. Transaction List (scrollable history)
3. Settings (start/stop listening, language)
4. Setup/Onboarding (first-time user guide)

---

## **\*\*Activities\*\***

- [ ] Design simple, accessible UI (low-literacy friendly)
- [ ] Implement home dashboard with:
  - Today's total sales
  - Number of transactions
  - Start/stop listening button
- [ ] Create transaction list view
- [ ] Build simple settings screen
- [ ] Design onboarding flow
- [ ] Test UI with 5 potential users

## **\*\*Testing Criteria\*\***

- UI understandable without instructions
- Large, clear buttons and text
- Works well in bright sunlight
- Fast loading (<2 seconds)

## **\*\*Deliverables\*\***

- Working mobile app UI
- User testing feedback report
- UI/UX documentation

---

## **## PHASE 2: Alpha Testing & Refinement (Months 5-6)**

### **### \*\*Month 5: Integration & Alpha Testing\*\***

### #### \*\*Week 1: System Integration\*\*

#### \*\*Activities\*\*

- [ ] Connect all modules (audio → STT → detection → database → UI)
- [ ] Implement end-to-end transaction flow
- [ ] Add error handling and recovery
- [ ] Create logging and debugging tools
- [ ] Performance optimization
- [ ] Battery optimization tweaks

#### \*\*Integration Testing\*\*

- Test complete flow: conversation → detected transaction → saved to database → displayed in UI
- Stress testing (100+ transactions in one day)
- Edge case handling
- Memory leak detection

---

### #### \*\*Week 2-4: Alpha Testing with Real Sellers\*\*

#### \*\*Alpha Test Program\*\*

...

Participants: 5 fish sellers (friendly early adopters)

Duration: 3 weeks

Location: 2-3 different markets

Methodology: Daily usage with weekly check-ins

...

#### \*\*Activities\*\*

- [ ] Recruit 5 alpha testers
- [ ] Provide testing phones (or install on their phones)
- [ ] Conduct onboarding training
- [ ] Monitor usage daily via remote logging
- [ ] Weekly in-person check-ins
- [ ] Collect feedback through:
  - Voice recordings (what they like/dislike)
  - Transaction accuracy validation

- Feature request discussions
- Problem reports

### **\*\*Success Metrics for Alpha\*\***

- All 5 testers use app for full 3 weeks
- >60% transaction detection accuracy
- <5 critical bugs reported
- >50% of testers willing to continue using

### **\*\*Deliverables\*\***

- Alpha testing report
- Bug list with priorities
- Feature request backlog
- User testimonial videos (if positive)

---

## **### \*\*Month 6: Iteration Based on Alpha Feedback\*\***

### **#### \*\*Week 1-2: Critical Bug Fixes\*\***

#### **\*\*Activities\*\***

- ☐ Fix all critical bugs from alpha testing
- ☐ Improve transaction accuracy based on real usage data
- ☐ Optimize patterns that caused false positives
- ☐ Enhance UI based on user confusion points
- ☐ Improve battery optimization

---

### **#### \*\*Week 3-4: Feature Enhancements\*\***

#### **\*\*High Priority Features\*\* (based on expected feedback)**

- ☐ Manual transaction entry (for missed sales)
- ☐ Transaction editing/deletion
- ☐ End-of-day summary voice report
- ☐ Weekly sales comparison

- [ ] Simple profit tracking (buy price vs sell price)

## **\*\*Testing\*\***

- Regression testing (ensure fixes didn't break existing features)
- User acceptance testing with alpha testers
- Performance validation

## **\*\*Deliverables\*\***

- Improved app version (v0.5)
- Updated documentation
- Release notes

---

## **## PHASE 3: Beta Launch & Language Expansion (Months 7-8)**

### **### \*\*Month 7: Beta Launch Preparation\*\***

#### **#### \*\*Week 1-2: Twi Language Support\*\***

##### **\*\*Activities\*\***

- [ ] Collect 100+ Twi transaction recordings
- [ ] Train Twi-specific speech model
- [ ] Add Twi pattern recognition
- [ ] Test Twi/English code-switching
- [ ] Update UI with Twi translations

---

#### **#### \*\*Week 3-4: Beta Program Setup\*\***

##### **\*\*Beta Test Program\*\***

...

Participants: 30 fish sellers across 5 markets

Duration: 8 weeks

Selection: Mix of alpha testers + new users

Support: Dedicated WhatsApp group for support

## **\*\*Activities\*\***

- [ ] Recruit 30 beta testers
- [ ] Create beta tester agreement
- [ ] Set up support infrastructure:
  - WhatsApp support group
  - Phone support line (2 hours daily)
  - Remote monitoring dashboard
- [ ] Prepare training materials:
  - Video tutorials (English + Twi)
  - Printed quick-start guide
  - FAQ document

## **\*\*Beta Success Metrics\*\***

- 25+ active users after 8 weeks (>80% retention)
- >70% transaction accuracy
- <10 critical bugs
- Average 4/5 stars user satisfaction

## **### \*\*Month 8: Beta Testing & Monitoring\*\***

### **#### \*\*Ongoing Activities\*\***

- [ ] Daily monitoring of app performance
- [ ] Weekly feedback collection via WhatsApp
- [ ] Bi-weekly in-person check-ins at markets
- [ ] Continuous bug fixing
- [ ] Performance optimization based on usage data
- [ ] Collect success stories and testimonials

### **#### \*\*Data Collection\*\***

- Transaction accuracy rates by market/seller
- Most common false positives/negatives
- Battery usage across different phone models
- Feature usage statistics

- User satisfaction scores

**\*\*Deliverables\*\***

- Beta testing report
- Updated feature roadmap
- User case studies (3-5 detailed stories)
- Performance benchmark report

---

**## PHASE 4: Advanced Features & Scaling (Months 9-10)**

**### \*\*Month 9: Advanced Intelligence Features\*\***

**#### \*\*Week 1-2: Sales Analytics\*\***

**\*\*Features\*\***

- ☐ Weekly/monthly sales trends
- ☐ Best-selling fish identification
- ☐ Peak hours analysis
- ☐ Sales predictions
- ☐ Comparative analytics (this week vs last week)

---

**#### \*\*Week 3-4: Business Intelligence\*\***

**\*\*Features\*\***

- ☐ Inventory recommendations
- ☐ Pricing insights (compare with market averages)
- ☐ Customer pattern recognition (repeat customers)
- ☐ Seasonal trend alerts
- ☐ Profit margin calculator

---

**### \*\*Month 10: Additional Language Support\*\***

### **\*\*Languages to Add\*\***

- ☐ Ga (coastal regions)
- ☐ Ewe (Volta region)
- ☐ Fante (Central region)

### **\*\*Activities for Each Language\*\***

- Collect 50+ transaction recordings
- Train language-specific models
- Add UI translations
- Test with native speakers
- Document common phrases

---

## **## PHASE 5: Pre-Launch & Marketing (Month 11)**

### **### \*\*Week 1-2: Production Readiness\*\***

#### **\*\*Technical Preparation\*\***

- ☐ Security audit and penetration testing
- ☐ Privacy compliance review (GDPR, local laws)
- ☐ Performance optimization for scale
- ☐ Set up production infrastructure:
  - Firebase production environment
  - Cloud backup systems
  - Monitoring and alerting
  - Customer support ticketing system

#### **\*\*Legal & Compliance\*\***

- ☐ Terms of service
- ☐ Privacy policy
- ☐ User data protection measures
- ☐ Business registration (if needed)

---

### ### \*\*Week 3-4: Marketing & Launch Preparation\*\*

#### \*\*Marketing Materials\*\*

- [ ] Create promotional videos (Twi + English)
- [ ] Design posters for markets
- [ ] Build simple website/landing page
- [ ] Social media presence (Facebook, WhatsApp)
- [ ] Press releases for local media

#### \*\*Partnerships\*\*

- [ ] Approach market associations
- [ ] Connect with microfinance institutions
- [ ] Partner with mobile money providers (MTN, AirtelTigo)
- [ ] Reach out to NGOs supporting small businesses

#### \*\*Launch Strategy\*\*

...

Soft Launch: 3 markets with existing beta testers

Public Launch: Expand to 20+ markets over 4 weeks

Launch Event: Market demonstrations and free training

...

---

### ## PHASE 6: Public Launch (Month 12)

#### ### \*\*Week 1: Soft Launch\*\*

##### \*\*Activities\*\*

- [ ] Launch in 3 beta test markets
- [ ] Intensive on-ground support (daily presence)
- [ ] Monitor closely for issues
- [ ] Quick iteration on feedback
- [ ] Gather launch testimonials

---

### ### \*\*Week 2-3: Expanded Rollout\*\*

#### \*\*Activities\*\*

- ☐ Expand to 10 additional markets
- ☐ Conduct market demonstrations
- ☐ Train early adopters to help others
- ☐ Media outreach (radio, TV, newspapers)
- ☐ Social media campaign

#### \*\*Scaling Support\*\*

- Hire 2-3 field support staff
- Set up regional training hubs
- Create seller ambassador program
- 24/7 WhatsApp support

---

### ### \*\*Week 4: Full Launch & Celebration\*\*

#### \*\*Activities\*\*

- ☐ Make app publicly available (Google Play Store)
- ☐ Launch celebration events in key markets
- ☐ Share impact stories and metrics
- ☐ Gather user testimonials and videos
- ☐ Plan for continued growth

---

### ## Post-Launch: Continuous Improvement (Ongoing)

#### ### \*\*Monthly Activities\*\*

- Release app updates (bug fixes, features)
- Collect user feedback and feature requests
- Monitor transaction accuracy and performance
- Expand to new markets and regions
- Build partnerships for financial inclusion

### ### \*\*Quarterly Goals\*\*

- Q1 Post-Launch: 500 active users
- Q2: 2,000 active users, add 2 new languages
- Q3: 5,000 active users, launch in new cities
- Q4: 10,000 active users, explore expansion to other product types

---

## ## Resource Requirements

### ### \*\*Development Team\*\*

- 1 Full-time developer (you + possibly 1 partner)
- 1 Part-time ML engineer (can be same person or consultant)
- 1 Part-time UI/UX designer (freelance, months 3-4)
- 2-3 Field support staff (months 11-12+)

### ### \*\*Technology Costs\*\*

- Google Cloud credits: \$100-200/month
- Firebase: \$50-100/month
- Domain & hosting: \$20/month
- Testing devices: \$500-1000 one-time
- Recording equipment: \$300 one-time

### ### \*\*Operational Costs\*\*

- Market research: \$1,000
- Beta tester compensation: \$500
- Marketing materials: \$1,000
- Launch events: \$2,000
- Field staff salaries: \$1,500/month (3 people)

### ### \*\*Total Estimated Budget: \$15,000-25,000 for Year 1\*\*

---

## ## Risk Management

### ### \*\*Technical Risks\*\*

- **Risk**: Poor audio quality in noisy markets  
**Mitigation**: Advanced noise cancellation, multiple testing iterations
- **Risk**: Battery drain issues  
**Mitigation**: Extensive optimization, smart listening modes
- **Risk**: Low recognition accuracy  
**Mitigation**: Continuous model training, confidence scoring, manual override

### **Market Risks**

- **Risk**: Low smartphone penetration  
**Mitigation**: Start with markets with higher smartphone usage, consider feature phone version later
- **Risk**: User reluctance to adopt technology  
**Mitigation**: Free usage, intensive training, visible quick wins
- **Risk**: Competition from existing solutions  
**Mitigation**: Focus on authentic voice recognition advantage, build strong community

### **Business Risks**

- **Risk**: Difficulty monetizing  
**Mitigation**: Multiple revenue models (freemium, partnerships, data insights)
- **Risk**: Scaling challenges  
**Mitigation**: Gradual expansion, ambassador program, automated support

---

## Success Criteria by Phase

- Phase 1 (Month 4)**: Working MVP with >60% accuracy
- Phase 2 (Month 6)**: 5 happy alpha users, <5 critical bugs
- Phase 3 (Month 8)**: 25+ active beta users, >70% accuracy
- Phase 4 (Month 10)**: Advanced features working, 3+ languages
- Phase 5 (Month 11)**: Production ready, partnerships secured
- Phase 6 (Month 12)**: Public launch, 100+ active users

**\*\*Year 1 End Goal\*\*:** 500-1000 active daily users, 75%+ transaction accuracy, sustainable growth model

---

This roadmap embodies Luther's principles: starting with listening to real people, building something accessible and practical, testing continuously with actual users, and gradually expanding based on real needs rather than assumptions.
